

SMS MAIL

SMS ENABLE YOUR EMAIL

Features, Functions & Benefits

FEATURES

Email Client Independent:

Works with all email clients such as Outlook Express, Lotus Notes & Thunderbird.

Simple replies:

Replies are routed directly back to your Email Inbox.

Authorised User List:

Allows administrators to specify authorised users of SMS Mail to control cost and access.

Message Drafts:

Saves draft messages in your email clients.

Personalised Bulk SMS:

A text file containing mobile numbers with personalised messages may be added as an attachment to the email and used to send a bulk sms broadcast from your email client.

SMS concatenation:

Messages can be up to 700 characters long or 5 SMSes.

All SA networks supported:

SMSes can be sent to and received from **Vodacom, MTN and CellC** subscribers.

BENEFITS

Enable's Multi-channel Emailing via One Interface:

Desk-bound users can use their email client to send a message to both mobile (SMS) and desk-bound colleagues (Email).

Enable's Mobile Emailing:

A manager can send an email to his team using SMS on his mobile phone while tied up in a meeting on the other side of town.

Use **SMS Mail** to send **SMS** messages from your **EMAIL** and receive replies directly to your **"INBOX"**. With SMS Mail there is no need for any additional software.

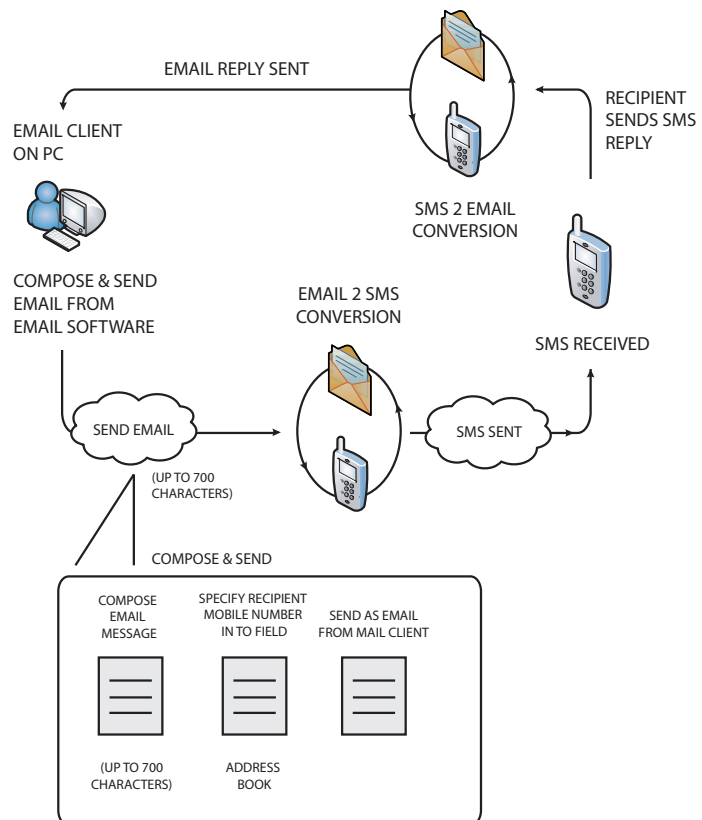

How Does SMS Mail Work?

Send an Email to SMS – Sending SMS using your email is easy! First we authorise your email address on our system to allow you to send SMS through your email system. Then we issue you an authorisation code, which goes into the subject line of each Email to SMS you send. You then type an email with an address of **mobilenumber@sms.gvi.co.za** and your message.

We collect this email and send it to the person's cell phone as an SMS message. To respond, the person just presses reply and enters the message. When he or she presses **'send'** the system automatically sends the message back to your email address.

And, if needs be, SMS Mail can send a message of up to 700 characters or 5 SMSes.

Send a SMS to Email – To send an email from your mobile phone, you type a normal SMS message, with the recipient's email address first, followed by a space and then the message text. SMSMail receives your SMS and detects the email address at the start of the message. The system then creates an email with that address and simply adds the message text that appears thereafter.

SENDING A EMAIL TO SMS
